Lucend and InterGlobix Announce “An Evening on the Green” During DCD Connect, Virginia 2026

Hosted by Lucend and powered by InterGlobix Event Collaboration, the invitation-only evening will bring digital infrastructure executives together for golf, dinner, and conversation on November 3, 2026

LOUDOUN COUNTY, Va., October 27, 2026— Lucend, a technology company delivering data center optimization through Transparent AI, and InterGlobix, a global media, events, and strategic communications platform focused on digital infrastructure, announce “**An Evening on the Green,**” an exclusive executive gathering taking place on **November 3, 2026, at Topgolf Loudoun, Virginia**, during **DCD Connect | Virginia 2026**.

Hosted by Lucend and powered by InterGlobix Event Collaboration, the evening will bring together a select group of executives and industry leaders for golf, dinner, and informal discussion. As the digital infrastructure community gathers in Virginia for DCD Connect on November 3–4, 2026, the event will offer an intimate setting to deepen relationships, exchange perspectives, and continue conversations beyond the conference floor.

The collaboration combines Lucend’s focus on helping data center teams improve operational performance with InterGlobix’s expertise in connecting leaders across the digital infrastructure ecosystem.

The event also comes amid a broader relationship between Lucend and IG Group, an affiliate company of InterGlobix, which recently signed a strategic advisory agreement to support Lucend’s global market engagement and business development initiatives. Through the agreement, IG Group is helping Lucend strengthen industry relationships and expand awareness of its Transparent AI solutions across the data center, cloud, and digital infrastructure communities.

Introducing Lucend: Transparent AI for Data Center Operations

Lucend helps data center operators translate complex operational data into clear, actionable recommendations. Formerly known as Coolgradient, the company’s Transparent AI platform analyzes information from existing infrastructure to identify inefficiencies, detect emerging issues, and recommend improvements to operational performance and resource efficiency.

Its technology gives operators visibility into how recommendations are developed and their anticipated impact, supporting informed decisions about energy efficiency, reliability, and maintenance. Operators remain in control of implementation, with recommendations grounded in verifiable data and designed to work with existing infrastructure without requiring new hardware. Today, the platform is being deployed across more than 40 data center sites on three continents.

Hosting “An Evening on the Green” provides an opportunity for Lucend to connect with industry peers and encourage the exchange of ideas among the people building, operating, and supporting digital infrastructure.

“DCD Virginia brings together people tackling some of the most pressing challenges in data center operations, and we look forward to continuing those conversations in a more personal setting,” said **René Gompel, CEO and Co-founder, Lucend**. “At Lucend, we help operators turn complex data

into clear decisions that improve performance and resource efficiency. Hosting ‘An Evening on the Green,’ allows us to exchange perspectives with industry peers and build relationships that support continued progress.”

“Industry gatherings create valuable opportunities to connect, and the conversations around them can be just as important as those on the conference stage,” said **Vinay Nagpal, Co-founder, InterGlobix**. “Through InterGlobix Event Collaboration, we bring together our sector knowledge, executive network, and experience in curating industry engagement. We are delighted to power ‘An Evening on the Green,’ hosted by Lucend during DCD Virginia, and create an opportunity for leaders to strengthen relationships and continue discussions in a relaxed, focused setting.”

Event Details and Invitations

About Lucend

Lucend helps data center operators run their facilities more efficiently and reliably. Its platform, Gradient, uses Transparent AI to turn the data a facility already generates (from BMS, power and DCIM systems) into quantified, verifiable recommendations across energy, cooling, maintenance and reliability, with operators always in control. Gradient requires no new hardware and is being deployed across more than 40 data center sites on three continents. Formerly known as Coolgradient, Lucend is based in New York and Amsterdam and was co-founded by René Gompel (CEO) and Jasper de Vries (CTO). Learn more at getlucend.com.
